SERVICE OFFER AND DELIVERY MODEL

ISO/IEC 42001 Assurance Framework

Compliance that a company's systems produce every day,
not a folder of documents assembled before each audit.

DRAFT - FOR INTERNAL REVIEW

28 October 2026

AURION ENTERPRISES (PTY) LTD

Smart systems. Strategic execution.

Registration no.: 2026/466313/07 (CIPC)
Tax no.: 9138738290
Director: R.T.P. (Teboho) Morobe

Executive summary

Aurion Enterprises turns ISO/IEC 42001 compliance into something a company's systems produce every day, rather than a folder of documents assembled before each audit. Clients get a Statement of Applicability (SoA) that is executed in their engineering pipelines, and audit evidence that accumulates automatically as their AI systems run.

The offer is a fixed-scope, five-phase engagement of 12 weeks, followed by an ongoing assurance retainer. It is sold in three tiers (Foundation, Professional, Enterprise) priced in South African Rand, with service levels that put numbers on response times, evidence turnaround and platform availability.

Why clients buy it

Audit-ready evidence on demand
Agent Passports, the Live AI Incident & Assurance Register and CI/CD risk tags give auditors traceable records, not recollections.

One control set, several obligations
The same data-quality, monitoring and transparency controls support POPIA compliance and independent audit readiness, so the client pays once.

Lower surveillance-audit risk
Nonconformities are logged and tracked continuously, so annual surveillance audits review a running system.

Clear commercial boundaries
Fixed fees per phase, a published rate card and named pass-through costs, with no open-ended billing.

Who it is for: South African fintechs, SaaS and technology companies, enterprises and parastatals that build or deploy AI systems and need a credible route to accredited ISO/IEC 42001 certification.

What Aurion does not do
Certification is issued only by an accredited certification body. Aurion prepares the client, supports the audit and maintains readiness; it does not certify and does not guarantee an audit outcome.

ISO/IEC 42001 alignment

Each Aurion control domain is mapped to the management-system clauses (4-10) and to the Annex A control themes of ISO/IEC 42001:2023. The Aurion domain numbers (A.1-A.6) are Aurion's own working labels; the crosswalk below is how they are presented to certification bodies.

Aurion domain	What the client gets	Aurion technical control	ISO/IEC 42001 reference
A.1 Policy	Executive AI Governance Charter and Board Oversight Policy	Multi-agent policy engine enforcing ethical boundary conditions	Clause 5 (Leadership, AI policy); Annex A theme: policies related to AI
A.2 Risk	AIRA & AIIA Operational Toolkit and impact matrices	Automated AIIA validation scripts in CI/CD; risk tags in the Live Incident Register	Clause 6 (AI risk assessment, treatment and AI system impact assessment); Annex A theme: assessing impacts of AI systems
A.3 Data	Data Quality, Lineage and Privacy Audit Framework	Schema validation and hygiene pipelines in data-ingestion sub-agents; rejection logs kept as evidence (ISO/IEC 5259)	Annex A theme: data for AI systems
A.4 Security	Infrastructure and Model Security Compliance Checklist	Input/output guardrails and adversarial test runs	Clause 8 (Operation); Annex A themes: AI system life cycle, verification and validation
A.5 Transparency	Model Interpretability and Bias Mitigation Standard	Extended Agent Passports logging execution logic, provenance and decision boundaries	Annex A themes: information for interested parties, event logging
A.6 Monitoring	Continuous AI Incident Response and Assurance Plan	Live AI Incident & Assurance Register with continuous nonconformity tracking	Clause 9 (Performance evaluation) and Clause 10 (Improvement, nonconformity and corrective action)

Reading the crosswalk. Clauses 4 and 7 (context, support, competence, documented information) are covered by Phases 1 and 2. Annex A theme names above are paraphrased and should be checked against the licensed standard text before the SoA is issued to a client; the SoA must also record, per Annex A control, whether it is included or excluded and why.

Delivery model

Every engagement runs the same five phases. Phases 1 to 4 take 12 weeks; Phase 5 continues for as long as the client keeps the retainer. Each phase ends at a gate the client signs off before the next one starts.

Phases 1-4: 12 weeks, each ending at a client sign-off gate. Phase 5: continues while the retainer runs.

Phase	Weeks	Key activities	Deliverables	Exit gate
1. Gap analysis and scope	1-3	Maturity assessment against ISO/IEC 42001; AI system boundaries; model inventory	Baseline SoA and gap report	Scope and inventory signed off
2. Governance and risk architecture	4-6	Executive charter; risk appetite thresholds; AIIA routines built into development workflows	AI Governance Charter; AIRA & AIIA Toolkit	Charter approved by top management
3. Technical control implementation	7-10	Agent Passports; data hygiene pipelines (ISO/IEC 5259); monitoring guardrails in client infrastructure	Operating controls and Live Incident Register	Controls running in production, evidence being generated
4. Pre-audit and mock assessment	11-12	Full Stage 1 (documentation) and Stage 2 (implementation) mock audits	Mock audit report; nonconformity log	Major nonconformities closed
5. Certification and surveillance	Ongoing	Support for external auditors; annual surveillance schedule; live register reporting	Continuous Incident Response and Assurance Plan; quarterly assurance report	Certificate issued and surveillance audits passed

Why the mock audit is not optional
Clients that skip Phase 4 carry the highest risk of failing Stage 2. Aurion therefore treats the mock audit as a required part of the Professional and Enterprise tiers, and as a strongly recommended add-on to Foundation.

Service tiers and pricing (ZAR, excluding 15% VAT)

Three tiers cover the range from a small AI team that wants a governed starting point to a multi-system enterprise that needs full certification support. Implementation is a fixed fee per tier; ongoing assurance is a quarterly retainer.

The Foundation range equals Phase 1 (R25,000 - R40,000) plus Phase 2 (R45,000 - R70,000). The Professional range equals Phases 1 to 4 at their individual ranges, adding Phase 3 (R80,000 - R150,000) and Phase 4 (R35,000 - R55,000). Where a client sits inside a range depends mainly on the number of AI systems and how much of Phase 3 the client's own engineers can do.

	Foundation	Professional	Enterprise
Best for	Early-stage AI teams building internally	SaaS, fintech and mid-size companies seeking certification	Large enterprises, parastatals, multi-entity groups
Phases included	1-2	1-4	1-5
AI systems in scope	Up to 2	Up to 5	6 or more, quoted per portfolio

	Foundation	Professional	Enterprise
Implementation fee	R70,000 - R110,000	R185,000 - R315,000	From R350,000
Mock audit (Stage 1 and 2)	Optional add-on, R35,000 - R55,000	Included	Included, plus a second pre-surveillance mock
Agent Passports and CI/CD risk tags	Design only	Configured and live	Configured and live across all in-scope systems
Live Incident Register	Template	Hosted and configured	Hosted, configured and integrated with client ticketing/SIEM
Certification-audit support	Not included	Preparation and document review	Aurion attends Stage 1 and Stage 2 with the client
Ongoing assurance retainer	Essentials: R15,000 per quarter (optional)	Standard: R30,000 per quarter	Premium: from R60,000 per quarter
Service level	Bronze	Silver	Gold

Rate card for work outside the fixed scope

Role	Rate per hour (excl. VAT)
AI governance consultant	R1,000 - R1,200
Technical implementation engineer	R1,000
Public-sector and parastatal panel work	R1,350 - R1,500 (VAT-inclusive benchmark)

Costs the client pays separately (pass-through, not Aurion revenue)

- **Certification body fees** for Stage 1 and Stage 2: typically R60,000 - R120,000 for a moderately complex AI management system, depending on auditor days. Aurion can introduce accredited bodies but does not take a commission.
- **ISO/IEC 42001 Foundation training:** roughly R5,120 - R32,000 per delegate depending on depth.
- **Optional Aurion platform operator training** for client teams on the Live Incident Register: quoted per cohort.

Payment terms: 40% on signature, 40% at the Phase 3 gate, 20% at completion of Phase 4 (Foundation: 50% on signature, 50% at completion of Phase 2). Retainers are invoiced quarterly in advance.

> **Price basis**
> Ranges and the R15,000 quarterly anchor come from the pricing note supplied with the brief. The Standard and Premium retainers, the Enterprise starting fee and the payment terms are proposals to be confirmed. Certification-body and training figures should be re-quoted before any client proposal is issued.

Service levels (SLA)

Service levels attach to the ongoing assurance retainer and match the tier: Bronze with Foundation, Silver with Professional, Gold with Enterprise. Business hours are 08:00-17:00 South African Standard Time, Monday to Friday, excluding public holidays. Gold Severity 1 cover runs 24/7.

Severity definitions

Severity	Definition	Example
1 - Critical	Harm, regulatory breach or loss of the Register or Passport controls in production	AI agent acts outside its Passport boundaries on live customer data
2 - High	Control failure or significant nonconformity without immediate harm	Data-quality pipeline stops rejecting malformed input
3 - Medium	Degraded function or a documentation gap with a workaround	Impact assessment template fails to export
4 - Low	Question, enhancement or minor correction	Request to add a field to a report

Service level targets

Measure	Bronze	Silver	Gold
Response, Severity 1	4 business hours	2 hours	30 minutes, 24/7
Response, Severity 2	1 business day	4 business hours	2 hours
Response, Severity 3	3 business days	2 business days	1 business day
Response, Severity 4	5 business days	3 business days	2 business days
Workaround or fix target, Severity 1	Best effort	8 hours	4 hours
Live Incident Register availability (monthly)	Not applicable (template)	99.5%	99.9%
Audit evidence pack after an auditor or client request	10 business days	5 business days	2 business days
Corrective-action plan after a logged nonconformity	Not included	10 business days	5 business days
Reporting	Annual readiness review	Quarterly assurance report	Monthly dashboard and quarterly board report
Named contact	Shared service desk	Named assurance lead	Named assurance lead and technical lead

Service credits

If Aurion misses the availability target, the client receives a credit against the next quarterly retainer invoice. A missed Severity 1 response target earns a flat 5% credit for that quarter. During implementation, a milestone that slips more than five business days because of Aurion earns a 2% fee credit per further week, capped at 10% of that phase's fee.

Monthly availability	Silver credit	Gold credit
Below target but at least 99.0%	5%	5%
Below 99.0% but at least 98.0%	10%	10%
Below 98.0%	15% (cap)	20%, capped at 25% in any quarter

Exclusions. Credits do not apply to planned maintenance announced at least five business days ahead (up to four hours a month), outages caused by the client's or a third party's infrastructure, client changes made outside the agreed change process, or force majeure.

> **What the SLA does not promise**
> It does not guarantee certification, the result of any audit, or the absence of AI incidents. It commits Aurion to detecting, logging and responding to them within the times above.

Governance, client responsibilities and assumptions

The commitments above depend on both parties doing their part, and on a few boundaries that keep Aurion independent.

Governance of the engagement

- A steering group of the client's executive sponsor and Aurion's engagement lead meets at each phase gate.
- The client's top management owns the AI policy, risk appetite and SoA decisions, as ISO/IEC 42001 requires. Aurion drafts and advises; it does not decide on the client's behalf.
- Aurion keeps advisory work separate from certification: it does not act as the client's certification body or influence the auditor's findings.

What Aurion needs from the client

- A named executive sponsor and a technical lead, available weekly.

- Access to AI system inventories, repositories and CI/CD pipelines within five business days of signature.
- Engineer time for Phase 3; the fixed fee assumes the client supplies it.
- Timely review of deliverables, within five business days.

Assumptions

- Pricing assumes up to the number of AI systems shown for each tier; additional systems are priced at the rate card or by variation order.
- Data processing under POPIA is covered by an operator agreement between Aurion and the client before any live data is touched.
- Fees are in South African Rand, excluding VAT, valid for 30 days, and reviewed annually on retainers.
- Certification fees, auditor travel and third-party tooling licences are the client's cost.

Alternatives to consider and next steps

The structure above is one way to package the offer. Three alternatives are worth weighing before it goes to clients.

Option	How it differs	Trade-off
Outcome-linked pricing	Part of the Professional fee (for example 20%) is paid only when the client passes Stage 2	Strong sales message; Aurion carries audit risk it does not control
Subscription-only model	Monthly platform fee for the Register and Passports, with consulting sold separately	Smoother revenue; weaker fit for clients who want one fixed project price
Sector bundles	Fintech and public-sector packages with POPIA and procurement requirements built in	Easier to sell to a defined segment; more upfront preparation

Next steps

1. Confirm the tier prices and retainers, especially Standard, Premium and the Enterprise starting fee.
2. Re-quote certification-body and training costs with current South African providers.
3. Check the crosswalk and the SoA numbering against the licensed ISO/IEC 42001 text.
4. Have counsel review the SLA credits, exclusions and POPIA operator terms.
